

FACULTY OF FOOD AND CONSUMER SCIENCE

DEPARTMENT OF FOOD SCIENCE

FSC 203: SCIENCE, TECHNOLOGY AND SOCIETY

OBJECTIVE EXAMINATION

1. Science can be defined as:

- A. Only a body of knowledge
- B. Only a process of investigation
- C. Both a body of knowledge and a process of inquiry
- D. Only a social activity

Answer: C

2. Which of the following is NOT a science skill?

- A. Observation
- B. Hypothesizing
- C. Praying
- D. Experimenting

Answer: C

3. The product of science includes all EXCEPT:

- A. Principles
- B. Facts
- C. Opinions
- D. Theories

Answer: C

4. According to the manual, science is an intellectual activity aimed at:

- A. Making money
- B. Understanding nature
- C. Creating art
- D. Building cities

Answer: B

5. Who defined science as “a systematized body of knowledge and a process of inquiry”?

- A. Holkbrook (1992)
- B. Mani (1985)
- C. Gottlieb (2004)
- D. None of the above

Answer: B

6. Science is considered:

- A. Subjective and opinion-based
- B. Testable and falsifiable
- C. Fixed and unchangeable
- D. Philosophical only

Answer: B

7. Which of these is part of the scientific process?

- A. Observation
- B. Classification
- C. Drawing conclusions

D. All of the above

Answer: D

8. The body of knowledge in science is:

A. Chaotic

B. Organized

C. Based on beliefs

D. Secret

Answer: B

9. Holkbrook (1992) defined science as:

A. A political tool

B. An intellectual activity to understand nature

C. A religious quest

D. A business enterprise

Answer: B

10. Scientific knowledge is:

A. Verifiable

B. Debated

C. Contingent

D. All of the above

Answer: D

11. Technology is best described as:

A. Only tools and machines

- B. The practical application of scientific knowledge
- C. A type of science
- D. Only electronic devices

Answer: B

12. Which is an example of technology?

- A. Telescope
- B. Cooking techniques
- C. Medicaments
- D. All of the above

Answer: D

13. Technology uses resources such as:

- A. Matter and energy
- B. Only money
- C. Only human labor
- D. None of the above

Answer: A

14. One important attribute of technology is that it:

- A. Happens by chance
- B. Is developed and learned
- C. Cannot be taught
- D. Is only for rich nations

Answer: B

15. Technology can be classified into:

- A. Material and Knowledge-based
- B. Old and new
- C. Cheap and expensive
- D. Simple and complex

Answer: A

16. Material technology includes:

- A. Improved plant varieties
- B. Management skills
- C. Scientific theories
- D. All of the above

Answer: A

17. Knowledge-based technology refers to:

- A. Tools and equipment
- B. Technical knowledge and skills
- C. Natural resources
- D. Religious beliefs

Answer: B

18. Technology is seen in some countries as:

- A. A consumable item
- B. Something that can be produced
- C. An engine of growth

D. Both B and C

Answer: D

19. Society is defined as:

A. A group of people sharing institutions and culture

B. Only a family unit

C. A government system

D. A business organization

Answer: A

20. Science and technology in agriculture help to:

A. Reduce yields

B. Increase efficiency

C. Decrease nutritional content

D. Increase post-harvest loss

Answer: B

21. Food production must double in coming decades to meet demand, especially in improving resistance to:

A. Drought and pests

B. Political changes

C. Economic policies

D. Cultural practices

Answer: A

22. Science and technology are considered Global Public Goods because:

- A. They are expensive
- B. Their benefits can be extended at little marginal cost
- C. They belong to one country
- D. They are secret

Answer: B

23. In health, science and technology have contributed through:

- A. Vaccines
- B. Diagnostic equipment
- C. Genetic engineering
- D. All of the above

Answer: D

24. Which disease is prevented by vaccines according to the text?

- A. Measles
- B. Headache
- C. Malaria
- D. Diabetes

Answer: A

25. The development of _____ has made previously complicated surgeries simple.

- A. Simple tools
- B. Complex surgical equipment
- C. Herbal medicine

D. Prayers

Answer: B

26. Biotechnology is a contribution of science and technology to:

A. Agriculture only

B. Health only

C. Both agriculture and health

D. Transportation only

Answer: C

27. Communication in the olden days was through:

A. Telephones

B. Messengers and horse-riders

C. Email

D. Television

Answer: B

28. The term “global village” is used to describe the impact of:

A. Agriculture

B. Transportation

C. Telecommunication

D. Home appliances

Answer: C

29. Radios and televisions are products of advances in:

A. Health

B. Communication

C. Agriculture

D. Transportation

Answer: B

30. Transportation has been revolutionized by science and technology through:

A. Cars, trains, airplanes

B. Only walking

C. Only animals

D. None of the above

Answer: A

31. The fastest means of transportation is:

A. Car

B. Ship

C. Airplane

D. Bicycle

Answer: C

32. Home appliances like refrigerators and air conditioners are examples of technology applied to:

A. Improve comfort

B. Increase farm yields

C. Cure diseases

D. Communicate faster

Answer: A

33. Which of these is a home appliance mentioned?

A. Microwave

B. Pressure cooker

C. Freezer

D. All of the above

Answer: D

34. Science is a _____ activity.

A. Physical

B. Intellectual

C. Social

D. Economic

Answer: B

35. Scientists come to consensus on:

A. Personal opinions

B. Truths of the natural world

C. Political policies

D. Religious doctrines

Answer: B

36. The process of science does NOT include:

A. Observation

- B. Guesswork without testing
- C. Hypothesis testing
- D. Data collection

Answer: B

37. Technology is traced back to:

- A. The last century only
- B. The beginning of time
- C. The industrial revolution
- D. The computer age

Answer: B

38. Technology is described as:

- A. The engine of growth
- B. A consumable item only
- C. A natural resource
- D. A type of government

Answer: A

39. In agriculture, science and technology help to:

- A. Reduce nutritional content
- B. Increase post-harvest loss
- C. Improve resistance to salinity
- D. Decrease efficiency

Answer: C

40. The regulatory challenges in food safety are expected to:

- A. Decrease
- B. Increase exponentially
- C. Remain the same
- D. Vanish

Answer: B

41. Malaysia's technological success was based on:

- A. Heavy investment in people and infrastructure
- B. Luck
- C. Natural resources only
- D. Importing all technology

Answer: A

42. Science and technology in poverty alleviation act as:

- A. A barrier
- B. Global Public Goods
- C. A cause of poverty
- D. Irrelevant

Answer: B

43. X-rays and scanning machines are used in:

- A. Communication
- B. Health diagnosis
- C. Transportation

D. Agriculture

Answer: B

44. Genetic engineering is part of:

A. Biotechnology

B. Telecommunication

C. Transportation

D. Home appliances

Answer: A

45. The old means of transportation included:

A. Trekking and horse riding

B. Cars and buses

C. Airplanes

D. Submarines

Answer: A

46. Home appliances are meant to make life:

A. More difficult

B. More comfortable

C. More expensive

D. More isolated

Answer: B

47. Science is described as a _____ body of knowledge.

A. Disorganized

- B. Systematized
- C. Secret
- D. Fixed

Answer: B

48. Which of these is a scientific process?

- A. Prediction
- B. Problem identification
- C. Experimenting
- D. All of the above

Answer: D

49. Technology solves problems through:

- A. Application of science
- B. Magic
- C. Religious faith
- D. Political power

Answer: A

50. Material technology embeds knowledge into:

- A. Tools and equipment
- B. Ideas only
- C. Books only
- D. None of the above

Answer: A

51. Which of the following is NOT a characteristic of scientific knowledge?

- A. Testable
- B. Falsifiable
- C. Permanent and unchanging
- D. Debatable

Answer: C

52. According to Gottlieb (2004), science is designed to:

- A. Discover information about the natural world
- B. Create political systems
- C. Promote religious beliefs
- D. Increase economic profits only

Answer: A

53. The process of science includes all except:

- A. Observation
- B. Arbitrary guessing
- C. Measurement
- D. Data interpretation

Answer: B

54. Science seeks to organize information into:

- A. Meaningful patterns
- B. Random facts
- C. Secret codes

D. Religious texts

Answer: A

55. Technology is the systematic application of:

A. Human rationality to solve problems

B. Magic spells

C. Political power

D. Artistic skills

Answer: A

56. Which is an example of material technology?

A. Improved animal breeds

B. Management skills

C. Technical knowledge

D. Financial accounting

Answer: A

57. Knowledge-based technology includes:

A. Technical knowledge

B. Tractors

C. Vaccines

D. Hybrid seeds

Answer: A

58. Society is characterized by sharing:

A. Language and dress

- B. Only economic resources
- C. Only political power
- D. Only religious beliefs

Answer: A

59. Science and technology in agriculture aim to reduce:

- A. Post-harvest loss
- B. Nutritional content
- C. Efficiency
- D. Yields

Answer: A

60. Advances in science and technology in agriculture require:

- A. Environmentally sustainable practices
- B. Increased pollution
- C. More manual labor only
- D. Ignoring social impacts

Answer: A

61. The role of science and technology in poverty alleviation is that they:

- A. Stimulate economic growth
- B. Increase poverty
- C. Are irrelevant to the poor
- D. Only benefit rich countries

Answer: A

62. In health, vaccines prevent diseases such as:

- A. Smallpox and polio
- B. Headache and back pain
- C. Diabetes and hypertension
- D. All of the above

Answer: A

63. Diagnostic equipment includes:

- A. X-ray machines
- B. Tractors
- C. Telephones
- D. Refrigerators

Answer: A

64. Telecommunication has turned the world into a:

- A. Global village
- B. Divided continent
- C. Slower place
- D. More expensive place

Answer: A

65. In transportation, airplanes have made travel:

- A. Faster
- B. Slower
- C. More dangerous

D. Impossible

Answer: A

66. Which home appliance is used for food preservation?

A. Refrigerator

B. Fan

C. Room heater

D. Telephone

Answer: A

67. Science involves direct interaction with:

A. Nature

B. Supernatural forces

C. Political leaders

D. Financial markets

Answer: A

68. Scientists set aside _____ when doing science.

A. Values

B. Facts

C. Tools

D. Data

Answer: A

69. The product content of science is embedded in:

A. Facts, concepts, principles, and theories

- B. Religious scriptures
- C. Political manifestos
- D. Artistic expressions

Answer: A

70. Scientific processes help to raise the right kinds of questions about:

- A. Objects and events around us
- B. Supernatural phenomena
- C. Political scandals
- D. Financial markets

Answer: A

71. Technology is a disciplined process that uses resources of:

- A. Matter, energy, and natural phenomena
- B. Only money
- C. Only human labor
- D. Only raw materials

Answer: A

72. The invention of the telescope is an example of:

- A. Technology
- B. Pure science only
- C. Art
- D. Religion

Answer: A

73. Technology improves human:

- A. Potentials
- B. Physical strength only
- C. Spiritual life only
- D. Political power only

Answer: A

74. Technology modifies the:

- A. Environment
- B. Human DNA only
- C. Laws of nature
- D. Political systems only

Answer: A

75. Technology is used to carry out:

- A. Socio-economic activities
- B. Only scientific experiments
- C. Only religious ceremonies
- D. Only artistic performances

Answer: A

76. Technology does not just happen; it is:

- A. Developed and learned
- B. Naturally occurring
- C. Accidentally discovered

D. Supernaturally given

Answer: A

77. Technology is the engine of:

A. Growth

B. Destruction

C. Poverty

D. Ignorance

Answer: A

78. In many non-developing countries, technology is viewed as:

A. A consumable item

B. Something to be produced

C. An engine of growth

D. A public good

Answer: A

79. Science and technology in agriculture facilitate:

A. Higher yields

B. Lower yields

C. More labor

D. Less efficiency

Answer: A

80. Food production must double to meet rising demand and challenges like:

A. Drought and pests

- B. Political instability
- C. Religious conflicts
- D. Artistic demands

Answer: A

81. Regulatory challenges in food safety will:

- A. Increase exponentially
- B. Decrease
- C. Remain constant
- D. Disappear

Answer: A

82. Science and technology are ultimate Global Public Goods because:

- A. Benefits can be extended at little marginal cost
- B. They are very expensive
- C. They are controlled by one country
- D. They are secretive

Answer: A

83. Science and technology have made significant progress in areas like:

- A. Agriculture, health, energy, water, environment
- B. Only space exploration
- C. Only military weapons
- D. Only entertainment

Answer: A

84. The most important contribution of science and technology to health is:

- A. Cures or prevention measures for ailments
- B. Making diseases more complex
- C. Increasing healthcare costs
- D. Reducing life expectancy

Answer: A

85. Complex surgical equipment has made surgeries:

- A. Simple
- B. More complicated
- C. More expensive only
- D. Unnecessary

Answer: A

86. Genetic engineering is a development in:

- A. Biotechnology
- B. Telecommunication
- C. Transportation
- D. Home appliances

Answer: A

87. In communication, messages in the olden days took:

- A. Months to reach distant places
- B. Seconds
- C. Minutes

D. Years

Answer: A

88. With telephones, one can talk to distant relatives in:

A. Few seconds

B. Months

C. Years

D. Never

Answer: A

89. Radios provide news from:

A. All corners of the world

B. Only local areas

C. Only one country

D. No news at all

Answer: A

90. Television allows you to see happenings in:

A. Far-off lands

B. Only your city

C. Only fictional stories

D. Only sports events

Answer: A

91. Transportation by land includes:

A. Cars, buses, trains

B. Only airplanes

C. Only ships

D. Only walking

Answer: A

92. Transportation by sea includes:

A. Ships and canoes

B. Only airplanes

C. Only cars

D. Only trains

Answer: A

93. Transportation by air includes:

A. Airplanes

B. Only cars

C. Only ships

D. Only trains

Answer: A

94. Time and distance are no longer major problems due to advances in:

A. Transportation

B. Agriculture

C. Health

D. Religion

Answer: A

95. The world has grown smaller because of:

- A. Advances in transportation and communication
- B. Political agreements
- C. Religious unity
- D. Economic policies

Answer: A

96. Home appliances like freezers are used for:

- A. Preserving food and cooling drinks
- B. Cooking only
- C. Heating rooms
- D. Communication

Answer: A

97. Fans and air conditioners are used during:

- A. Hot season
- B. Cold season
- C. Rainy season
- D. All seasons

Answer: A

98. Room heaters are used when:

- A. There is cold
- B. There is heat
- C. There is rain

D. There is wind

Answer: A

99. Microwaves and pressure cookers are examples of:

A. Home appliances

B. Farm equipment

C. Medical tools

D. Communication devices

Answer: A

100. Science and technology have helped in producing appliances that make life:

A. More comfortable

B. More difficult

C. More expensive

D. More isolated

Answer: A

101. Science is a system that develops a scientifically based:

A. Knowledge base

B. Religious doctrine

C. Political system

D. Artistic style

Answer: A

102. Science shapes knowledge in the form of:

A. Verifiable predictions and explanations

- B. Unverifiable claims
- C. Religious prophecies
- D. Artistic expressions

Answer: A

103. Science is a compendium of ideas that can be:

- A. Rationally and logically explained
- B. Only felt emotionally
- C. Only believed on faith
- D. Only understood by experts

Answer: A

104. Science investigates the physical world, including:

- A. Humans and the things they make
- B. Only natural phenomena
- C. Only celestial bodies
- D. Only microscopic organisms

Answer: A

105. Science has a special method that allows different scientists to produce:

- A. The same kind of knowledge
- B. Different knowledge based on beliefs
- C. Secret knowledge
- D. Only theoretical knowledge

Answer: A

106. Scientists perform experiments in the same way and agree on:

- A. Hypotheses
- B. Personal opinions
- C. Religious doctrines
- D. Political ideologies

Answer: A

107. The product of science helps describe, explore, and predict:

- A. Regularities in nature
- B. Supernatural events
- C. Political changes
- D. Economic trends

Answer: A

108. Scientific knowledge is:

- A. Contingent
- B. Absolute and final
- C. Based on tradition
- D. Unchangeable

Answer: A

109. From the list of scientific processes, which involves making an educated guess?

- A. Hypothesizing
- B. Observation
- C. Measurement

D. Classification

Answer: A

110. Which process involves grouping objects based on characteristics?

A. Classification

B. Prediction

C. Experimentation

D. Data collection

Answer: A

111. Which process involves anticipating future events based on data?

A. Prediction

B. Observation

C. Analysis

D. Inference

Answer: A

112. Which process involves testing a hypothesis?

A. Experimentation

B. Observation

C. Classification

D. Measurement

Answer: A

113. Which process involves drawing conclusions from data?

A. Inference

- B. Observation
- C. Measurement
- D. Prediction

Answer: A

114. Which process involves assigning numerical values?

- A. Measurement
- B. Observation
- C. Classification
- D. Problem identification

Answer: A

115. Which process involves recognizing an issue to be studied?

- A. Problem identification
- B. Observation
- C. Experimentation
- D. Data interpretation

Answer: A

116. Which process involves collecting information systematically?

- A. Data collection
- B. Prediction
- C. Analysis
- D. Extrapolation

Answer: A

117. Which process involves extending data trends?

- A. Extrapolation
- B. Observation
- C. Classification
- D. Measurement

Answer: A

118. Which process involves making sense of collected data?

- A. Data interpretation
- B. Observation
- C. Experimentation
- D. Prediction

Answer: A

119. Which process involves breaking down information into parts?

- A. Analysis
- B. Observation
- C. Classification
- D. Measurement

Answer: A

120. Science is a means by which man investigates his world and gains:

- A. Knowledge
- B. Wealth
- C. Power

D. Spiritual insight

Answer: A

121. Technology uses scientific results to develop:

A. Tools, equipment, and techniques

B. Only theories

C. Only laws

D. Only concepts

Answer: A

122. Technology improves human potentials by solving:

A. Practical problems

B. Theoretical problems only

C. Spiritual problems

D. Artistic problems

Answer: A

123. Technology is concerned with applying science to solve:

A. Human problems

B. Only scientific puzzles

C. Only mathematical equations

D. Only philosophical questions

Answer: A

124. Technology is a means of harnessing our understanding of nature for:

A. Our own benefit

- B. Nature's benefit only
- C. Supernatural purposes
- D. Destructive purposes

Answer: A

125. Technology is used to improve the:

- A. Human condition and natural environment
- B. Only economic condition
- C. Only political condition
- D. Only spiritual condition

Answer: A

126. Technology refers to processes dealing with:

- A. Materials and their end products
- B. Only ideas
- C. Only natural phenomena
- D. Only human behavior

Answer: A

127. Technology is the systematic application of collective human rationality to solve problems through control over:

- A. Nature
- B. Human minds
- C. Economic systems

D. Political systems

Answer: A

128. Technology can be traced to man's quest to improve his:

A. Way and quality of life

B. Only physical strength

C. Only spiritual life

D. Only social status

Answer: A

129. Technology is the total application of man's:

A. Knowledge, skills, tools, and materials

B. Only knowledge

C. Only skills

D. Only tools

Answer: A

130. Technology uses scientific knowledge to develop:

A. Goods and services useful to man

B. Only weapons

C. Only artworks

D. Only religious items

Answer: A

131. Technology is a practical problem-solving enterprise propelled by:

A. Scientific discovery or societal needs

- B. Only political will
- C. Only economic incentives
- D. Only cultural traditions

Answer: A

132. Material technology includes tools, equipment, agro-chemicals, improved plant varieties, improved animal breeds, and:

- A. Vaccines
- B. Management skills
- C. Technical knowledge
- D. Financial systems

Answer: A

133. Knowledge-based technology includes technical knowledge, management skills, and other processes needed to:

- A. Produce products or grow crops
- B. Only conduct scientific research
- C. Only govern a country
- D. Only create artworks

Answer: A

134. Society is a group of humans living together for self-maintenance and:

- A. Self-perpetuation
- B. Only economic gain
- C. Only political power

D. Only religious purposes

Answer: A

135. Society shares its own:

A. Institutions and culture

B. Only economic resources

C. Only political ideology

D. Only religious beliefs

Answer: A

136. Society is a long-standing group sharing cultural aspects such as language, dress, norms of behavior, and:

A. Artistic forms

B. Only genetic traits

C. Only economic systems

D. Only political systems

Answer: A

137. Advances in science and technology in agriculture have led to greater nutritional content in the world's:

A. Food supply

B. Water supply

C. Air quality

D. Soil quality

Answer: A

138. To meet rising demand, food production must double while also improving resistance to temperature extremes and:

- A. Salinity
- B. Political changes
- C. Economic policies
- D. Cultural shifts

Answer: A

139. Reducing post-harvest loss must be done in an environmentally and socially:

- A. Sustainable manner
- B. Unsustainable manner
- C. Expensive manner
- D. Quick manner

Answer: A

140. The necessary technology for increasing agricultural output is available in many developing countries, but certain:

- A. Requisites must be met
- B. Prayers must be said
- C. Laws must be ignored
- D. Traditions must be abandoned

Answer: A

141. Science and technology have been central in the fight against:

- A. Poverty

- B. Only diseases
- C. Only illiteracy
- D. Only crime

Answer: A

142. Advances in science and technology are considered Global Public Goods because once discovered, their benefits can be extended at little or no:

- A. Marginal cost
- B. Benefit
- C. Effort
- D. Time

Answer: A

143. Science and technology hold the best prospects for continued progress in areas such as agriculture, health, energy, water, and:

- A. Environmental concerns
- B. Only space exploration
- C. Only military defense
- D. Only entertainment

Answer: A

144. The ability to provide cures or prevention measures for ailments is the most important contribution of science and technology to:

- A. Health
- B. Agriculture

- C. Transportation
- D. Communication

Answer: A

145. The development of vaccines prevents attacks by diseases such as measles, smallpox, polio, and:

- A. Yellow fever
- B. Headache
- C. Malaria
- D. Diabetes

Answer: A

146. Diagnostic equipment helps in detecting diseases and includes X-rays and:

- A. Scanning machines
- B. Tractors
- C. Telephones
- D. Refrigerators

Answer: A

147. The biotechnology industry is a contribution of science and technology to:

- A. Health and agriculture
- B. Only transportation
- C. Only communication
- D. Only home appliances

Answer: A

148. In communication, wireless apparatus allows messages to be conveyed to far-off places in:

- A. No time
- B. Months
- C. Years
- D. Days

Answer: A

149. Telecommunication has made the whole world a:

- A. Global village
- B. Divided planet
- C. Slower place
- D. More expensive place

Answer: A

150. Transportation by air using airplanes is now:

- A. Very easy
- B. Very difficult
- C. Very expensive only
- D. Very slow

Answer: A

151. Because of advances in transportation, time and distance are no longer a:

- A. Problem to society
- B. Concern to anyone

- C. Factor in travel
- D. Barrier to communication

Answer: A

152. The credit for achievements in transportation goes to:

- A. Science
- B. Religion
- C. Politics
- D. Art

Answer: A

153. Home appliances like freezers and refrigerators are used for preserving food and:

- A. Cooling drinks
- B. Heating food
- C. Cooking food
- D. Washing clothes

Answer: A

154. Fans and air conditioners are used during the:

- A. Hot season
- B. Cold season
- C. Rainy season
- D. Dry season only

Answer: A

155. Room heaters are used when there is:

- A. Cold
- B. Heat
- C. Rain
- D. Wind

Answer: A

156. Microwaves and pressure cookers are used for:

- A. Cooking and heating food
- B. Cooling food
- C. Preserving food
- D. Cleaning food

Answer: A

157. Science and technology have helped produce appliances that make life more comfortable, such as:

- A. All of the above appliances
- B. Only communication devices
- C. Only transportation vehicles
- D. Only medical equipment

Answer: A

158. Science is a formal activity that creates knowledge by direct interaction with:

- A. Nature
- B. Society

C. Government

D. Religion

Answer: A

159. Science allows scientists to produce the same kind of knowledge regardless of their:

A. Social and political context

B. Religious beliefs

C. Economic status

D. Cultural background only

Answer: A

160. Scientists agree upon and reject the same:

A. Hypotheses

B. Political ideologies

C. Religious doctrines

D. Cultural practices

Answer: A

161. The product content of science is testable, falsifiable, verifiable, contingent, and:

A. Debatable

B. Absolute

C. Secret

D. Unchangeable

Answer: A

162. Scientific processes involve several activities to obtain valid:

- A. Generalizations
- B. Opinions
- C. Beliefs
- D. Traditions

Answer: A

163. Scientific processes raise the right kinds of questions about:

- A. Objects and events around us
- B. Supernatural phenomena
- C. Political events
- D. Economic trends

Answer: A

164. Mani (1985) defined science as a systematized body of knowledge and a process of inquiry to study the:

- A. World around us
- B. Universe only
- C. Human mind only
- D. Spiritual realm only

Answer: A

165. Holkbrook (1992) defined science as an intellectual activity through which men seek to understand:

- A. Nature

- B. Society
- C. God
- D. Themselves only

Answer: A

166. Gottlieb (2004) viewed science as an intellectual activity designed to discover information about the:

- A. Natural world
- B. Supernatural world
- C. Political world
- D. Economic world

Answer: A

167. Technology is a disciplined process that uses the resources of matter, energy, and:

- A. Natural phenomena
- B. Human labor only
- C. Financial capital only
- D. Intellectual ideas only

Answer: A

168. The invention of techniques of cooking, canning, bottling, or preservation are seen as:

- A. Technologies
- B. Sciences
- C. Arts

D. Religions

Answer: A

169. Technology employs knowledge, skills, and tools to improve human potentials, solve practical problems, and modify our:

A. Environment

B. Genetic makeup

C. Spiritual beliefs

D. Political systems

Answer: A

170. Technology is concerned with the application of science to obtain practical solutions to the myriad of:

A. Human problems

B. Scientific puzzles

C. Mathematical equations

D. Philosophical questions

Answer: A

171. Technology simply put is a means of harnessing and exploiting our understanding of nature for our own:

A. Benefit

B. Detriment

C. Entertainment

D. Education only

Answer: A

172. Technology is an application of knowledge for:

A. Practical purpose

B. Theoretical purpose only

C. Spiritual purpose only

D. Artistic purpose only

Answer: A

173. Technology is used to improve human condition, natural environment, or to carry out other:

A. Socio-economic activities

B. Only scientific experiments

C. Only religious ceremonies

D. Only artistic performances

Answer: A

174. One important attribute of technology is that it does not just happen; it is:

A. Developed and learned

B. Naturally occurring

C. Accidentally discovered

D. Supernaturally given

Answer: A

175. Technology is the systematic application of collective human rationality to the solution of human problems through the assertion of control over:

- A. Nature
- B. Human behavior
- C. Economic systems
- D. Political systems

Answer: A

176. Technology is the engine of:

- A. Growth
- B. Destruction
- C. Stagnation
- D. Regression

Answer: A

177. Technology can be traced historically to the beginning of time as man's quest to improve his way and quality of:

- A. Life
- B. Only work
- C. Only worship
- D. Only warfare

Answer: A

178. Technology is the total and complete application of man's knowledge, skills, tools, and:

- A. Materials

- B. Only ideas
- C. Only natural resources
- D. Only financial resources

Answer: A

179. Technology is the use of scientific knowledge to develop and produce goods and services useful to:

- A. Man
- B. Only animals
- C. Only plants
- D. Only the environment

Answer: A

180. Technology is a practical problem-solving enterprise, which is propelled by scientific discovery or by:

- A. Societal needs
- B. Only political will
- C. Only economic incentives
- D. Only cultural traditions

Answer: A

181. Material technology is where knowledge is embedded into technological products such as tools, equipment, agro-chemicals, improved plant varieties or hybrids, improved breeds of animals, and:

- A. Vaccines

- B. Management skills
- C. Technical knowledge
- D. Financial systems

Answer: A

182. Knowledge-based technology includes technical knowledge, management skills, and other processes needed to successfully produce products or:

- A. Grow crops
- B. Conduct research only
- C. Govern a country
- D. Create artworks

Answer: A

183. Society is a group of humans living together for self-maintenance and self-perpetuation and sharing their own:

- A. Institution and culture
- B. Only economic resources
- C. Only political power
- D. Only religious beliefs

Answer: A

184. Society could also be defined as a long-standing group of people sharing cultural aspects such as languages, dress, norms of behaviors, and:

- A. Artistic forms
- B. Only genetic traits

- C. Only economic systems
- D. Only political systems

Answer: A

185. Advances in science and technology have facilitated higher yields, greater efficiency, and greater nutritional content in the world's:

- A. Food supply
- B. Water supply
- C. Air quality
- D. Soil quality

Answer: A

186. Food production must double in the coming decades to meet rising demand and meet challenges such as improving resistance to drought, pests, salinity, and:

- A. Temperature extremes
- B. Political changes
- C. Economic policies
- D. Cultural shifts

Answer: A

187. Raising the nutritional content and reducing post-harvest loss must be done in an environmentally and socially:

- A. Sustainable manner
- B. Unsustainable manner
- C. Expensive manner

D. Quick manner

Answer: A

188. At the same time, the regulatory challenges of assuring safety in food production and consumption will increase:

A. Exponentially

B. Linearly

C. Slowly

D. Not at all

Answer: A

189. Although the necessary technology for increasing agricultural output is available in many developing countries including Nigeria, certain:

A. Requisites must be met

B. Prayers must be said

C. Laws must be ignored

D. Traditions must be abandoned

Answer: A

190. Science and technology have been central in the progress made to date in the fight against poverty and in stimulating:

A. Economic growth

B. Only population growth

C. Only urban growth

D. Only cultural growth

Answer: A

191. Advances in science and technology are, in many ways, the ultimate Global Public Good: once discovered, their benefits can be extended to additional users at little or no:

A. Marginal costs

B. Benefits

C. Efforts

D. Time

Answer: A

192. In most basic and critical areas of human need, science and technology have made possible significant progress to date, and they hold the best prospects for continued progress, particularly with respect to agriculture, health, energy, water, and:

A. Environmental concerns

B. Only space exploration

C. Only military defense

D. Only entertainment

Answer: A

193. The most important contribution of science and technology to health is the ability to provide cures or prevention measures for the different ailments that:

A. Afflict man

B. Afflict animals only

C. Afflict plants only

D. Affect the environment only

Answer: A

194. Some contributions of science and technology to health include the discovery of complex techniques to cure previously incurable diseases and the development of vaccines to prevent attack by some diseases like measles, smallpox, polio, and:

A. Yellow fever

B. Headache

C. Malaria

D. Diabetes

Answer: A

195. Complex surgical equipment makes previously complicated surgeries:

A. Simple

B. More complicated

C. More expensive only

D. Unnecessary

Answer: A

196. Diagnostic equipment helps in detecting diseases and includes X-rays and scanning machines, while medication is available for:

A. All types of diseases

B. Only infectious diseases

C. Only chronic diseases

D. Only mental diseases

Answer: A

197. The development of genetic engineering and the biotechnology industry are contributions of science and technology to:

A. Health and agriculture

B. Only transportation

C. Only communication

D. Only home appliances

Answer: A

198. Science and technology have influenced the means of communication, making it possible to convey messages to far-off places in no time, turning the world into a:

A. Global village

B. Divided planet

C. Slower place

D. More expensive place

Answer: A

199. Transportation has been revolutionized by science and technology, making travel by land, sea, and air easy, and making the world:

A. Smaller

B. Larger

C. More dangerous

D. More expensive

Answer: A

200. Home appliances produced with the help of science and technology make life more comfortable and include freezers, refrigerators, fans, air conditioners, room heaters, microwaves, and:

A. Pressure cookers

B. Telephones

C. Radios

D. Televisions

Answer: A
